

Dr. Anna Lewis is a Faculty Member at Brigham and Women's Hospital (Division of General Internal Medicine and Primary Care) and Harvard Medical School. She is a bioethicist with a main focus on the ethical, legal and social implications of genetics and genomic technologies. She received her doctoral training in Systems Biology (University of Oxford) and worked for several years in the genetics industry. Her current interests include: the role of population descriptors, diversity in datasets, clinical use of polygenic scores, and genomic screening of babies. Her work integrates empirical and normative methodologies and is always done in close collaboration with scientists and healthcare providers. She is a member of numerous national and international ethics advisory and policy setting groups and is the co-founder and director of the Broad Institute Bioethics Initiative.
