

**Julie Holm** is a doctoral candidate in Public Health Policy and Management at New York University's School of Global Public Health, where she expects to complete her Ph.D. in 2027. As a health services researcher, her research focuses on insurance disparities, climate change, and value-based payment arrangements. Before entering academia, Ms. Holm built nearly a decade of health care industry experience in Idaho, leading finance and analytics teams at a large clinically and financially integrated network and working in revenue cycle management and clinical coding. She holds an M.B.A. with an emphasis in Hospital Administration and a background in Health Informatics. Along with her experience using the All of Us platform for several studies and her dissertation, Ms. Holm's work bridges rigorous quantitative methods and includes experience with EHR data; healthcare claims data; and Healthcare Cost and Utilization Project (HCUP), Health and Retirement Study (HRS), and Behavioral Risk Factor Surveillance System (BRFSS) datasets.
